

(a) Constant Step Size ($\alpha = 0.8$): Diffuse Stationary Distribution

(b) Decreasing Step Size ($\alpha_t = 0.8/\sqrt{t}$): Asymptotic Convergence

(c) Trajectories ($\alpha = 0.8$): Persistent Diffusion on $[-1, 1]$

(d) Trajectories ($\alpha_t = 0.8/\sqrt{t}$): AMSGrad Freezes at $x^* = -1$
